# Support Matrix

Micro Focus ArcSight Security products are a next-generation of data collection and storage engine that unifies log data collection, storage, and security data management in a scalable, high-performance software or appliance solution.

This document discusses operating system (OS), appliance, browser, and other support details for Management Center , Transformation Huband ArcSight SmartConnectors.

## Abbreviations Used in this Document

Abbreviation	Description
RHEL	Red Hat Enterprise Linux
OEL	Oracle Enterprise Linux
CentOS	Community Enterprise Operating System
IE	Internet Explorer
FF	Firefox
ESR	Extended Support Release (of Firefox)

## OS Support Policy

- A **certified** operating system means that platform support has been tested and certified with regression tests for the SmartConnector version.

ArcSight will accept support calls and address bugs for installations on the platform.

SmartConnector runs only on the platforms that are applicable to the connector type and specific device type. For example, the SmartConnector for Microsoft Windows Event Log runs on Windows platforms only.

- A **supported** operating system means means that ArcSight has performed a general run-through to verify that the platform support works as expected.

ArcSight will accept support calls and address bugs for installations.

## Support for Operating System Minor Releases Hosting ArcSight Infrastructure Software

Vendor supported and newly patched operating system instances hosting ArcSight software or new operating system minor releases (for example: from RHEL 7.4 to RHEL 7.5 or from RHEL 6.9 to 6.10) that

are not explicitly defined in the Product Support Matrix, are now approved by the ArcSight Product Management team for ArcSight support.

While the ArcSight product team may not have performed certification testing for the ArcSight components on the new minor or patched release, Micro Focus will support ArcSight products and components running on these upgraded OS releases on a 'best effort' basis.

Should an issue between the newer OS release and an ArcSight component be incapable of being fixed or worked around promptly, the customer may be asked to revert to a certified OS release listed in the Support Matrix until the problem can be fixed or the new OS release level has passed product certification testing.

**Note:** Major version changes, for example, RHEL 7.x to 8.0, are not implicitly supported and do require certification testing by the ArcSight product team before they are supported.

## Currently Supported Management Center Versions

The following table lists the supported appliance models, operating systems, supported browsers, and upgrade paths for each currently supported ArcMC/CHA version.

An asterisk (\*) next to a browser version indicates that the browser version supported is the one current at the date of release.

## SmartConnector Load Balancer Support Matrix

The following section describes the software and platform requirements for all releases of Micro Focus SmartConnector Load Balancer.

Servers should be dedicated to load balancing (not running other applications.)

For high availability (HA), there should be two separate servers, one for the active or primary Load Balancer and another for standby or secondary Load Balancer. They will share a virtual IP address, so they should be in the same network location.

In addition, use the standard hardware required to deploy more than one SmartConnector to create the pool of SmartConnectors. See the SmartConnector documentation for details.
