Package

**com.arcsight.coma.bridge**

# com.arcsight.coma.bridge

## Class AuthenticationException

All Implemented Interfaces:  
Serializable

```
public class AuthenticationException
extends Exception
```

Constructor Summary	
public	<a href="#">AuthenticationException</a> (String message)
public	<a href="#">AuthenticationException</a> (String service, String method)

Methods inherited from class java.lang.Throwable
fillInStackTrace, getCause, getLocalizedMessage, getMessage, getStackTrace, initCause, printStackTrace, printStackTrace, printStackTrace, setStackTrace, toString

Methods inherited from class java.lang.Object
equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

## Constructors

### AuthenticationException

```
public AuthenticationException(String message)
```

### AuthenticationException

```
public AuthenticationException(String service,
                               String method)
```

# com.arcsight.coma.bridge

## Class AuthorizationException

All Implemented Interfaces:  
Serializable

public class AuthorizationException  
extends Exception

Constructor Summary	
public	<a href="#">AuthorizationException</a> (String message)
public	<a href="#">AuthorizationException</a> (String service, String method, boolean classRequiresAuthentication, boolean methodRequiresAuthentication, String[] classRequiredRights, String[] methodRequiredRights)

Methods inherited from class java.lang.Throwable	
fillInStackTrace, getCause, getLocalizedMessage, getMessage, getStackTrace, initCause, printStackTrace, printStackTrace, printStackTrace, setStackTrace, toString	

Methods inherited from class java.lang.Object	
equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait	

## Constructors

### AuthorizationException

public AuthorizationException(String message)

(continued on next page)

## AuthorizationException

```
public AuthorizationException(String service,  
                             String method,  
                             boolean classRequiresAuthentication,  
                             boolean methodRequiresAuthentication,  
                             String[] classRequiredRights,  
                             String[] methodRequiredRights)
```

Package

**com.arcsight.coma.client.gwt**

# com.arcsight.coma.client.gwt Class RemoteServiceException

```
java.lang.Object
|
+-java.lang.Throwable
|
+-java.lang.Exception
|
+-com.arcsight.coma.client.gwt.RemoteServiceException
```

All Implemented Interfaces:  
Serializable, Serializable

public class **RemoteServiceException**  
extends **Exception**  
implements **Serializable**, **Serializable**

## Field Summary

public static final	<a href="#">ERROR_UNKNOWN</a> Value: -54188
---------------------	--

## Constructor Summary

public	<a href="#">RemoteServiceException()</a>
public	<a href="#">RemoteServiceException</a> (String message, Throwable cause)
public	<a href="#">RemoteServiceException</a> (String message)
public	<a href="#">RemoteServiceException</a> (Throwable cause)

## Method Summary

int	<a href="#">getErrorCode()</a>
String	<a href="#">getRemoteStacktrace()</a>
void	<a href="#">setErrorCode</a> (int errorCode)
void	<a href="#">setRemoteStacktrace</a> (String remoteStacktrace)

Methods inherited from class `java.lang.Throwable`

```
fillInStackTrace, getCause, getLocalizedMessage, getMessage, getStackTrace, initCause,
printStackTrace, printStackTrace, printStackTrace, setStackTrace, toString
```

Methods inherited from class `java.lang.Object`

```
equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait
```

## Fields

### **ERROR\_UNKNOWN**

```
public static final int ERROR_UNKNOWN
```

Constant value: `-54188`

## Constructors

### **RemoteServiceException**

```
public RemoteServiceException()
```

### **RemoteServiceException**

```
public RemoteServiceException(String message,
                               Throwable cause)
```

### **RemoteServiceException**

```
public RemoteServiceException(String message)
```

### **RemoteServiceException**

```
public RemoteServiceException(Throwable cause)
```

## Methods

### **getRemoteStacktrace**

```
public String getRemoteStacktrace()
```

---

## setRemoteStacktrace

```
public void setRemoteStacktrace(String remoteStacktrace)
```

---

## getErrorCode

```
public int getErrorCode()
```

---

## setErrorCode

```
public void setErrorCode(int errorCode)
```

Package

**com.arcsight.product.core.service.v1.axis2.  
jaxws**

# com.arcsight.product.core.service.v1.axis2.jaxws

## Class AuthenticationExceptionBean

```
java.lang.Object
|
+-com.arcsight.product.core.service.v1.axis2.jaxws.AuthenticationExceptionBean
```

```
public class AuthenticationExceptionBean
extends Object
```

This class was generated by the JAX-WS RI. JAX-WS RI 2.1.5-b03- Generated source version: 2.1.5

### Constructor Summary

public	<a href="#">AuthenticationExceptionBean()</a>
--------	---

### Method Summary

String	<a href="#">getMessage()</a>
void	<a href="#">setMessage</a> (String message)

Methods inherited from class java.lang.Object
equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

### Constructors

#### AuthenticationExceptionBean

```
public AuthenticationExceptionBean()
```

### Methods

#### getMessage

```
public String getMessage()
```

**Returns:**  
returns String

## setMessage

```
public void setMessage(String message)
```

### Parameters:

message - the value for the message property

# com.arcsight.product.core.service.v1.axis2.jaxws

## Class AuthorizationExceptionBean

```
java.lang.Object
|
+-com.arcsight.product.core.service.v1.axis2.jaxws.AuthorizationExceptionBean
```

```
public class AuthorizationExceptionBean
extends Object
```

This class was generated by the JAX-WS RI. JAX-WS RI 2.1.5-b03- Generated source version: 2.1.5

### Constructor Summary

public	<a href="#">AuthorizationExceptionBean()</a>
--------	--

### Method Summary

String	<a href="#">getMessage()</a>
void	<a href="#">setMessage(String message)</a>

Methods inherited from class java.lang.Object
equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

### Constructors

#### AuthorizationExceptionBean

```
public AuthorizationExceptionBean()
```

### Methods

#### getMessage

```
public String getMessage()
```

**Returns:**  
returns String

## setMessage

```
public void setMessage(String message)
```

### Parameters:

message - the value for the message property

# com.arcsight.product.core.service.v1.axis2.jaxws

## Class GetAllRightsByGroupTypeResponse

java.lang.Object

└-com.arcsight.product.core.service.v1.axis2.jaxws.GetAllRightsByGroupTypeResponse

public class **GetAllRightsByGroupTypeResponse**  
extends Object

### Constructor Summary

public	<a href="#">GetAllRightsByGroupTypeResponse()</a>
--------	---

### Method Summary

HashMap	<a href="#">getReturn()</a>
void	<a href="#">setReturn</a> (HashMap _return)

### Methods inherited from class java.lang.Object

equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

## Constructors

### GetAllRightsByGroupTypeResponse

public **GetAllRightsByGroupTypeResponse**()

## Methods

### getReturn

public HashMap **getReturn**()

#### Returns:

returns HashMap>

## setReturn

```
public void setReturn(HashMap _return)
```

### Parameters:

\_return - the value for the \_return property

# com.arcsight.product.core.service.v1.axis2.jaxws

## Class LoginServiceAuthenticate

java.lang.Object

└-com.arcsight.product.core.service.v1.axis2.jaxws.LoginServiceAuthenticate

public class **LoginServiceAuthenticate**  
extends Object

### Constructor Summary

public	<a href="#">LoginServiceAuthenticate()</a>
--------	--

### Method Summary

<a href="#">AuthContext</a>	<a href="#">getAuthContext()</a>
String	<a href="#">getAuthToken()</a>
<a href="#">PasswordCredential</a>	<a href="#">getCred()</a>
void	<a href="#">setAuthContext</a> ( <a href="#">AuthContext</a> authContext)
void	<a href="#">setAuthToken</a> (String authToken)
void	<a href="#">setCred</a> ( <a href="#">PasswordCredential</a> cred)

#### Methods inherited from class java.lang.Object

equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

### Constructors

#### LoginServiceAuthenticate

public **LoginServiceAuthenticate**()

### Methods

## getAuthToken

```
public String getAuthToken()
```

### Returns:

returns String

---

## setAuthToken

```
public void setAuthToken(String authToken)
```

### Parameters:

`authToken` - the value for the authToken property

---

## getCred

```
public PasswordCredential getCred()
```

### Returns:

returns PasswordCredential

---

## setCred

```
public void setCred(PasswordCredential cred)
```

### Parameters:

`cred` - the value for the cred property

---

## getAuthContext

```
public AuthContext getAuthContext()
```

### Returns:

returns AuthContext

---

## setAuthContext

```
public void setAuthContext(AuthContext authContext)
```

### Parameters:

`authContext` - the value for the authContext property

---

# com.arcsight.product.core.service.v1.axis2.jaxws Class LoginServiceAuthenticateResponse

java.lang.Object

└-com.arcsight.product.core.service.v1.axis2.jaxws.LoginServiceAuthenticateResponse

```
public class LoginServiceAuthenticateResponse
extends Object
```

## Constructor Summary

public	<a href="#">LoginServiceAuthenticateResponse()</a>
--------	--

## Method Summary

<a href="#">AuthResponse</a>	<a href="#">getReturn()</a>
void	<a href="#">setReturn(<a href="#">AuthResponse</a> _return)</a>

## Methods inherited from class java.lang.Object

equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

## Constructors

### LoginServiceAuthenticateResponse

```
public LoginServiceAuthenticateResponse()
```

## Methods

### getReturn

```
public AuthResponse getReturn()
```

#### Returns:

returns AuthResponse

## setReturn

```
public void setReturn(AuthResponse _return)
```

### Parameters:

`_return` - the value for the `_return` property

# com.arcsight.product.core.service.v1.axis2.jaxws

## Class LoginServiceGetAuthenticationMethod

java.lang.Object

└-com.arcsight.product.core.service.v1.axis2.jaxws.LoginServiceGetAuthenticationMethod

public class **LoginServiceGetAuthenticationMethod**  
extends Object

### Constructor Summary

public	<a href="#">LoginServiceGetAuthenticationMethod()</a>
--------	---

### Method Summary

String	<a href="#">getAuthToken()</a>
void	<a href="#">setAuthToken</a> (String authToken)

### Methods inherited from class java.lang.Object

equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

## Constructors

### LoginServiceGetAuthenticationMethod

public **LoginServiceGetAuthenticationMethod**()

## Methods

### getAuthToken

public String **getAuthToken**()

#### Returns:

returns String

## setAuthToken

```
public void setAuthToken(String authToken)
```

### Parameters:

`authToken` - the value for the authToken property

# com.arcsight.product.core.service.v1.axis2.jaxws

## Class LoginServiceGetAuthenticationMethodResponse

```
java.lang.Object
|
+-
com.arcsight.product.core.service.v1.axis2.jaxws.LoginServiceGetAuthenticationMethodResponse
```

```
public class LoginServiceGetAuthenticationMethodResponse
extends Object
```

### Constructor Summary

public	<a href="#">LoginServiceGetAuthenticationMethodResponse()</a>
--------	---

### Method Summary

<a href="#">AuthMethod</a>	<a href="#">getReturn()</a>
void	<a href="#">setReturn</a> ( <a href="#">AuthMethod</a> _return)

Methods inherited from class java.lang.Object
equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

### Constructors

#### LoginServiceGetAuthenticationMethodResponse

```
public LoginServiceGetAuthenticationMethodResponse()
```

### Methods

#### getReturn

```
public AuthMethod getReturn()
```

**Returns:**  
returns AuthMethod

## setReturn

```
public void setReturn(AuthMethod _return)
```

### Parameters:

`_return` - the value for the `_return` property

# com.arcsight.product.core.service.v1.axis2.jaxws

## Class LoginServiceGetCurrentUser

```
java.lang.Object
├── com.arcsight.product.core.service.v1.axis2.jaxws.LoginServiceGetCurrentUser
```

```
public class LoginServiceGetCurrentUser
extends Object
```

### Constructor Summary

public	<a href="#">LoginServiceGetCurrentUser()</a>
--------	--

### Method Summary

String	<a href="#">getAuthToken()</a>
void	<a href="#">setAuthToken(String authToken)</a>

### Methods inherited from class java.lang.Object

`equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait`

## Constructors

### LoginServiceGetCurrentUser

```
public LoginServiceGetCurrentUser()
```

## Methods

### getAuthToken

```
public String getAuthToken()
```

#### Returns:

returns String

## setAuthToken

```
public void setAuthToken(String authToken)
```

### Parameters:

`authToken` - the value for the `authToken` property

# com.arcsight.product.core.service.v1.axis2.jaxws

## Class LoginServiceGetCurrentUserResponse

java.lang.Object

└-com.arcsight.product.core.service.v1.axis2.jaxws.LoginServiceGetCurrentUserResponse

```
public class LoginServiceGetCurrentUserResponse
extends Object
```

### Constructor Summary

public	<a href="#">LoginServiceGetCurrentUserResponse()</a>
--------	--

### Method Summary

<a href="#">User</a>	<a href="#">getReturn()</a>
----------------------	-----------------------------

void	<a href="#">setReturn(<a href="#">User</a> _return)</a>
------	---

Methods inherited from class java.lang.Object

equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

### Constructors

#### LoginServiceGetCurrentUserResponse

```
public LoginServiceGetCurrentUserResponse()
```

### Methods

#### getReturn

```
public User getReturn()
```

**Returns:**

returns User

## setReturn

```
public void setReturn(User _return)
```

### Parameters:

`_return` - the value for the `_return` property

# com.arcsight.product.core.service.v1.axis2.jaxws Class LoginServiceGetServiceMajorVersion

java.lang.Object

└-com.arcsight.product.core.service.v1.axis2.jaxws.LoginServiceGetServiceMajorVersion

public class **LoginServiceGetServiceMajorVersion**  
extends Object

## Constructor Summary

public	<a href="#">LoginServiceGetServiceMajorVersion()</a>
--------	--

## Method Summary

String	<a href="#">getAuthToken()</a>
--------	--------------------------------

void	<a href="#">setAuthToken(String authToken)</a>
------	--

Methods inherited from class java.lang.Object

equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

## Constructors

### LoginServiceGetServiceMajorVersion

public **LoginServiceGetServiceMajorVersion()**

## Methods

### getAuthToken

public String **getAuthToken()**

**Returns:**

returns String

## setAuthToken

```
public void setAuthToken(String authToken)
```

### Parameters:

`authToken` - the value for the `authToken` property

# com.arcsight.product.core.service.v1.axis2.jaxws

## Class LoginServiceGetServiceMajorVersionResponse

```
java.lang.Object
|
+-
com.arcsight.product.core.service.v1.axis2.jaxws.LoginServiceGetServiceMajorVersionResponse
```

```
public class LoginServiceGetServiceMajorVersionResponse
extends Object
```

Constructor Summary	
public	<a href="#">LoginServiceGetServiceMajorVersionResponse()</a>

Method Summary	
int	<a href="#">getReturn()</a>
void	<a href="#">setReturn(int _return)</a>

Methods inherited from class java.lang.Object	
equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait	

## Constructors

### LoginServiceGetServiceMajorVersionResponse

```
public LoginServiceGetServiceMajorVersionResponse()
```

## Methods

### getReturn

```
public int getReturn()
```

**Returns:**  
returns int

## setReturn

```
public void setReturn(int _return)
```

### Parameters:

`_return` - the value for the `_return` property

# com.arcsight.product.core.service.v1.axis2.jaxws Class LoginServiceGetServiceMinorVersion

java.lang.Object

└-com.arcsight.product.core.service.v1.axis2.jaxws.LoginServiceGetServiceMinorVersion

public class **LoginServiceGetServiceMinorVersion**  
extends Object

## Constructor Summary

public	<a href="#">LoginServiceGetServiceMinorVersion()</a>
--------	--

## Method Summary

String	<a href="#">getAuthToken()</a>
void	<a href="#">setAuthToken</a> (String authToken)

## Methods inherited from class java.lang.Object

equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

## Constructors

### LoginServiceGetServiceMinorVersion

public **LoginServiceGetServiceMinorVersion**()

## Methods

### getAuthToken

public String **getAuthToken**()

#### Returns:

returns String

## setAuthToken

```
public void setAuthToken(String authToken)
```

### Parameters:

`authToken` - the value for the `authToken` property

# com.arcsight.product.core.service.v1.axis2.jaxws

## Class LoginServiceGetServiceMinorVersionResponse

```
java.lang.Object
|
+-
com.arcsight.product.core.service.v1.axis2.jaxws.LoginServiceGetServiceMinorVersionResponse
```

public class LoginServiceGetServiceMinorVersionResponse  
extends Object

Constructor Summary	
public	<a href="#">LoginServiceGetServiceMinorVersionResponse()</a>

Method Summary	
int	<a href="#">getReturn()</a>
void	<a href="#">setReturn(int _return)</a>

Methods inherited from class java.lang.Object	
equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait	

## Constructors

### LoginServiceGetServiceMinorVersionResponse

public LoginServiceGetServiceMinorVersionResponse()

## Methods

### getReturn

public int **getReturn**()

**Returns:**  
returns int

## setReturn

```
public void setReturn(int _return)
```

### Parameters:

`_return` - the value for the `_return` property

# com.arcsight.product.core.service.v1.axis2.jaxws Class LoginServiceGetSession

java.lang.Object

└-com.arcsight.product.core.service.v1.axis2.jaxws.LoginServiceGetSession

public class LoginServiceGetSession  
extends Object

## Constructor Summary

public	<a href="#">LoginServiceGetSession()</a>
--------	--

## Method Summary

String	<a href="#">getAuthToken()</a>
--------	--------------------------------

void	<a href="#">setAuthToken(String authToken)</a>
------	--

Methods inherited from class java.lang.Object

equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

## Constructors

### LoginServiceGetSession

public LoginServiceGetSession()

## Methods

### getAuthToken

public String getAuthToken()

**Returns:**

returns String

## setAuthToken

```
public void setAuthToken(String authToken)
```

### Parameters:

`authToken` - the value for the `authToken` property

# com.arcsight.product.core.service.v1.axis2.jaxws Class LoginServiceGetSessionResponse

java.lang.Object

└-com.arcsight.product.core.service.v1.axis2.jaxws.LoginServiceGetSessionResponse

public class LoginServiceGetSessionResponse  
extends Object

## Constructor Summary

public	<a href="#">LoginServiceGetSessionResponse()</a>
--------	--

## Method Summary

<a href="#">Session</a>	<a href="#">getReturn()</a>
void	<a href="#">setReturn(<a href="#">Session</a> _return)</a>

## Methods inherited from class java.lang.Object

equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

## Constructors

### LoginServiceGetSessionResponse

public LoginServiceGetSessionResponse()

## Methods

### getReturn

public [Session](#) getReturn()

#### Returns:

returns Session

## setReturn

```
public void setReturn(Session _return)
```

### Parameters:

`_return` - the value for the `_return` property

# com.arcsight.product.core.service.v1.axis2.jaxws

## Class LoginServiceIsCASAAuth

```
java.lang.Object
├── com.arcsight.product.core.service.v1.axis2.jaxws.LoginServiceIsCASAAuth
```

```
public class LoginServiceIsCASAAuth
extends Object
```

Constructor Summary	
public	<a href="#">LoginServiceIsCASAAuth()</a>

Method Summary	
String	<a href="#">getAuthToken()</a>
void	<a href="#">setAuthToken(String authToken)</a>

Methods inherited from class java.lang.Object	
equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait	

## Constructors

### LoginServiceIsCASAAuth

```
public LoginServiceIsCASAAuth()
```

## Methods

### getAuthToken

```
public String getAuthToken()
```

**Returns:**  
returns String

## setAuthToken

```
public void setAuthToken(String authToken)
```

### Parameters:

`authToken` - the value for the `authToken` property

# com.arcsight.product.core.service.v1.axis2.jaxws Class LoginServiceIsCASAuthResponse

java.lang.Object

└-com.arcsight.product.core.service.v1.axis2.jaxws.LoginServiceIsCASAuthResponse

public class LoginServiceIsCASAuthResponse  
extends Object

## Constructor Summary

public	<a href="#">LoginServiceIsCASAuthResponse()</a>
--------	---

## Method Summary

boolean	<a href="#">isReturn()</a>
void	<a href="#">setReturn</a> (boolean _return)

## Methods inherited from class java.lang.Object

equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

## Constructors

### LoginServiceIsCASAuthResponse

public LoginServiceIsCASAuthResponse()

## Methods

### isReturn

public boolean isReturn()

#### Returns:

returns boolean

## setReturn

```
public void setReturn(boolean _return)
```

### Parameters:

`_return` - the value for the `_return` property

# com.arcsight.product.core.service.v1.axis2.jaxws

## Class LoginServiceLogin

```
java.lang.Object
├-com.arcsight.product.core.service.v1.axis2.jaxws.LoginServiceLogin
```

```
public class LoginServiceLogin
extends Object
```

### Constructor Summary

public	<a href="#">LoginServiceLogin()</a>
--------	-------------------------------------

### Method Summary

String	<a href="#">getAuthToken()</a>
String	<a href="#">getLogin()</a>
String	<a href="#">getPassword()</a>
void	<a href="#">setAuthToken(String authToken)</a>
void	<a href="#">setLogin(String login)</a>
void	<a href="#">setPassword(String password)</a>

### Methods inherited from class java.lang.Object

equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

### Constructors

#### LoginServiceLogin

```
public LoginServiceLogin()
```

### Methods

## getAuthToken

```
public String getAuthToken()
```

### Returns:

returns String

---

## setAuthToken

```
public void setAuthToken(String authToken)
```

### Parameters:

authToken - the value for the authToken property

---

## getLogin

```
public String getLogin()
```

### Returns:

returns String

---

## setLogin

```
public void setLogin(String login)
```

### Parameters:

login - the value for the login property

---

## getPassword

```
public String getPassword()
```

### Returns:

returns String

---

## setPassword

```
public void setPassword(String password)
```

### Parameters:

password - the value for the password property

---

# com.arcsight.product.core.service.v1.axis2.jaxws

## Class LoginServiceLoginForOneTimeUse

java.lang.Object

└-com.arcsight.product.core.service.v1.axis2.jaxws.LoginServiceLoginForOneTimeUse

public class **LoginServiceLoginForOneTimeUse**  
extends Object

### Constructor Summary

public	<a href="#">LoginServiceLoginForOneTimeUse()</a>
--------	--

### Method Summary

String	<a href="#">getAuthToken()</a>
String	<a href="#">getLogin()</a>
String	<a href="#">getPassword()</a>
void	<a href="#">setAuthToken(String authToken)</a>
void	<a href="#">setLogin(String login)</a>
void	<a href="#">setPassword(String password)</a>

### Methods inherited from class java.lang.Object

equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

### Constructors

#### LoginServiceLoginForOneTimeUse

public **LoginServiceLoginForOneTimeUse**()

### Methods

## getAuthToken

```
public String getAuthToken()
```

### Returns:

returns String

---

## setAuthToken

```
public void setAuthToken(String authToken)
```

### Parameters:

authToken - the value for the authToken property

---

## getLogin

```
public String getLogin()
```

### Returns:

returns String

---

## setLogin

```
public void setLogin(String login)
```

### Parameters:

login - the value for the login property

---

## getPassword

```
public String getPassword()
```

### Returns:

returns String

---

## setPassword

```
public void setPassword(String password)
```

### Parameters:

password - the value for the password property

---

# com.arcsight.product.core.service.v1.axis2.jaxws Class LoginServiceLoginForOneTimeUseResponse

```
public ObjectFactory()
```

# com.arcsight.product.core.service.v1.axis2.jaxws

## Class ServiceExceptionBean

```
java.lang.Object
|
+-com.arcsight.product.core.service.v1.axis2.jaxws.ServiceExceptionBean
```

```
public class ServiceExceptionBean
extends Object
```

This class was generated by the JAX-WS RI. JAX-WS RI 2.1.5-b03- Generated source version: 2.1.5

Constructor Summary	
public	<a href="#">ServiceExceptionBean()</a>

Method Summary	
int	<a href="#">getErrorCode()</a>
String	<a href="#">getMessage()</a>
void	<a href="#">setErrorCode(int errorCode)</a>
void	<a href="#">setMessage(String message)</a>

Methods inherited from class java.lang.Object
<code>equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait</code>

## Constructors

```
ServiceExceptionBean
public ServiceExceptionBean()
```

## Methods

```
getErrorCode
public int getErrorCode()
```

**Returns:**  
returns int

---

## **setErrorCode**

```
public void setErrorCode(int errorCode)
```

**Parameters:**  
errorCode - the value for the errorCode property

---

## **getMessage**

```
public String getMessage()
```

**Returns:**  
returns String

---

## **setMessage**

```
public void setMessage(String message)
```

**Parameters:**  
message - the value for the message property

Package

# com.arcsight.product.core.service.v1.model

## Class AuthContext

```
java.lang.Object
├--com.arcsight.product.core.service.v1.model.AuthContext
```

```
public class AuthContext
extends Object
```

### Constructor Summary

public	<a href="#">AuthContext()</a> Constructor
--------	--

### Method Summary

Boolean	<a href="#">getFallback()</a> Tests whether this authContext is fallen back or not.
void	<a href="#">setFallback(Boolean fallback)</a> Sets whether this authContext is fallen back.

Methods inherited from class java.lang.Object
equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

### Constructors

#### AuthContext

```
public AuthContext()
    Constructor
```

### Methods

#### getFallback

```
public Boolean getFallback()
    Tests whether this authContext is fallen back or not.

    Returns:
        True if this authContext is fallen back.
```

## setFallback

```
public void setFallback(Boolean fallback)
```

Sets whether this authContext is fallen back.

### Parameters:

`fallback` - If true, this authContext is fallen back.

# com.arcsight.product.core.service.v1.model

## Class AuthMethod

java.lang.Object

└-com.arcsight.product.core.service.v1.model.AuthMethod

```
public class AuthMethod
extends Object
```

Description of authentication method. Available methods are provided to the user, so that he/she could decide which method to use to connect to the server.

### JSON prototype

```
public AuthMethod()
```

Constructor

---

## AuthMethod

```
public AuthMethod(boolean localPassword,  
                  boolean externalUserId)
```

## Methods

### isLocalPassword

```
public boolean isLocalPassword()
```

Tests whether this AuthMethod has local password.

**Returns:**

True if this AuthMethod has local password.

---

### setLocalPassword

```
public void setLocalPassword(boolean localPassword)
```

Sets whether this AuthMethod has local password.

**Parameters:**

localPassword - the localPassword to set

---

### isExternalUserId

```
public boolean isExternalUserId()
```

Tests whether this authMethod has external user Id.

**Returns:**

True if this authMethod has external user Id.

---

### setExternalUserId

```
public void setExternalUserId(boolean externalUserId)
```

Sets whether this authMethod has external user Id.

**Parameters:**

externalUserId - IF true, this authMethod has external user Id.

---

# com.arcsight.product.core.service.v1.model

## Class AuthResponse

java.lang.Object

└-com.arcsight.product.core.service.v1.model.AuthResponse

public class **AuthResponse**  
extends Object

### Constructor Summary

public	<a href="#">AuthResponse()</a> Constructor
public	<a href="#">AuthResponse(String authToken)</a> Constructor

### Method Summary

String	<a href="#">getAuthToken()</a> Gets the string value of authToken.
<a href="#">User</a>	<a href="#">getUser()</a> Returns the user being authenticated.
boolean	<a href="#">isPasswordChangeRequired()</a> Gets whether or not the user must change their password.
boolean	<a href="#">isPasswordExpiring()</a> Notifies user that password is expiring soon.
void	<a href="#">setAuthToken(String authToken)</a> Sets the string value of authToken.
void	<a href="#">setPasswordExpiring(boolean passwordExpiring)</a> Sets whether password is expiring soon.
void	<a href="#">setUser(<a href="#">User</a> user)</a> Sets the user being authenticated.

#### Methods inherited from class java.lang.Object

equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

### Constructors

## AuthResponse

```
public AuthResponse()
```

Constructor

---

## AuthResponse

```
public AuthResponse(String authToken)
```

Constructor

**Parameters:**

`authToken` - The string value of authToken.

## Methods

### getAuthToken

```
public String getAuthToken()
```

Gets the string value of authToken.

**Returns:**

The string value of authToken.

---

### setAuthToken

```
public void setAuthToken(String authToken)
```

Sets the string value of authToken.

**Parameters:**

`authToken` - the string value authToken to set

---

### getUser

```
public User getUser()
```

Returns the user being authenticated.

**Returns:**

User being authenticated.

---

### setUser

```
public void setUser(User user)
```

Sets the user being authenticated.

**Parameters:**

`user` - The user being authenticated.

---

---

## isPasswordExpiring

```
public boolean isPasswordExpiring()
```

Notifies user that password is expiring soon.

**Returns:**

True if password is expiring soon.

---

## setPasswordExpiring

```
public void setPasswordExpiring(boolean passwordExpiring)
```

Sets whether password is expiring soon.

**Parameters:**

passwordExpiring - If true, password is expiring soon.

---

## isPasswordChangeRequired

```
public boolean isPasswordChangeRequired()
```

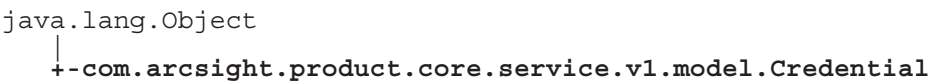

Gets whether or not the user must change their password.

**Returns:**

True if the user must change their password.

## Constructors

### PasswordCredential

```
public PasswordCredential()

    Constructor.
```

## PasswordCredential

```
public PasswordCredential(String userName,  
                          String password)
```

Constructor.

### Parameters:

`userName` - The login name of the login user.  
`password` - The password of the login user.

## Methods

### getPassword

```
public String getPassword()
```

Gets the password of the login user.

### Returns:

the password

---

### setPassword

```
public void setPassword(String password)
```

Sets the password for the login user.

### Parameters:

`password` - The password to set.

## Constructors

### ScheduledWorkPeriod

```
public ScheduledWorkPeriod()
```

## Methods

### getId

```
public Long getId()
```

Get the id.

**Returns:**  
the id

---

### setId

```
public void setId(Long id)
```

Set the id.

**Parameters:**  
id - the id to set

---

### getDayOfWeek

```
public Workday getDayOfWeek()
```

Get the dayOfWeek.

**Returns:**  
the dayOfWeek

---

### setDayOfWeek

```
public void setDayOfWeek(Workday dayOfWeek)
```

Set the dayOfWeek.

**Parameters:**  
dayOfWeek - the dayOfWeek to set

---

### getStartTime

```
public Time getStartTime()
```

Get the startTime.

**Returns:**  
the startTime

---

## setStartTime

```
public void setStartTime (Time startTime)
```

Set the startTime.

**Parameters:**  
startTime - the startTime to set

---

## getEndTime

```
public Time getEndTime ()
```

Get the endTime.

**Returns:**  
the endTime

---

## setEndTime

```
public void setEndTime (Time endTime)
```

Set the endTime.

**Parameters:**  
endTime - the endTime to set

---

## toString

```
public String toString ()
```

# com.arcsight.product.core.service.v1.model Class Session

└-com.arcsight.product.core.service.v1.model.Session

public class **Session**  
extends Object

DESCRIBE ME

JSON prototype

## Constructor Summary

public	<a href="#">Session()</a>
--------	---------------------------

## Method Summary

String	<a href="#">getAuthToken()</a> Gets the string value of authToken.
long	<a href="#">getCreationMillis()</a> Gets the long value of creation time in millisecond of this session.
long	<a href="#">getExpirationMillis()</a> Gets the long value of expiration time in millisecond of this session.
long	<a href="#">getUserId()</a> Gets the ID of the login user in this session.
void	<a href="#">setAuthToken(String authToken)</a> Sets the string value of authToken.
void	<a href="#">setCreationMillis(long creationMillis)</a> Sets the long value of creation time in millisecond of this session.
void	<a href="#">setExpirationMillis(long expirationMillis)</a> Sets the long value of expiration time in millisecond of this session.
void	<a href="#">setUserId(long userId)</a> Sets the ID of the login user in this session.

## Methods inherited from class java.lang.Object

equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

# Constructors

## Session

```
public Session()
```

# Methods

## getAuthToken

```
public String getAuthToken()
```

Gets the string value of authToken.

**Returns:**

The string value of authToken.

---

## setAuthToken

```
public void setAuthToken(String authToken)
```

Sets the string value of authToken.

**Parameters:**

`authToken` - The string value of authToken.

---

## getUserId

```
public long getUserId()
```

Gets the ID of the login user in this session.

**Returns:**

The ID of the login user.

---

## setUserId

```
public void setUserId(long userId)
```

Sets the ID of the login user in this session.

**Parameters:**

`userId` - The ID of login user.

---

## getCreationMillis

```
public long getCreationMillis()
```

Gets the long value of creation time in millisecond of this session.

**Returns:**

The long value of creation time in millisecond of this session.

---

## setCreationMillis

```
public void setCreationMillis(long creationMillis)
```

Sets the long value of creation time in millisecond of this session.

### Parameters:

`creationMillis` - The long value of creation time in millisecond of this session.

---

## getExpirationMillis

```
public long getExpirationMillis()
```

Gets the long value of expiration time in millisecond of this session.

### Returns:

The long value of expiration time in millisecond of this session.

---

## setExpirationMillis

```
public void setExpirationMillis(long expirationMillis)
```

Sets the long value of expiration time in millisecond of this session.

### Parameters:

`expirationMillis` - The long value of expiration time in millisecond of this session.

--------	---------------------------------------

### Method Summary

String	<a href="#">getDepartment()</a> Gets the department of this user.
String	<a href="#">getEmail()</a> Gets the email of this user.
String	<a href="#">getExternalLoginId()</a> Get the external login Id of this user.
String	<a href="#">getFax()</a> Gets the fax information of this user.
String	<a href="#">getFirstName()</a> Gets the first name of this user.
String[]	<a href="#">getGroupIds()</a> Gets the IDs of the groups which this user is/was in.
Long	<a href="#">getId()</a> Gets the ID of this user.
Boolean	<a href="#">getIsActive()</a> Tests whether this user is active.
boolean	<a href="#">getIsDefault()</a>
String	<a href="#">getLastName()</a> Gets the last name of this user.

String	<a href="#"><u>getLogin()</u></a> Gets the login name of this user.
boolean	<a href="#"><u>getMustChangePassword()</u></a> Tests whether the password is required to change.
String	<a href="#"><u>getNotes()</u></a> Gets the notes of this user.
String	<a href="#"><u>getPagerNumber()</u></a> Gets the pager number of this user.
String	<a href="#"><u>getPassword()</u></a> Gets the password of this user.
String	<a href="#"><u>getPhone()</u></a> Gets the phone number of this user.
List	<a href="#"><u>getScheduledWorkPeriods()</u></a> Gets the list of scheduled work periods for this user.
String	<a href="#"><u>getTitle()</u></a> Gets the title of this user.
boolean	<a href="#"><u>isLocked()</u></a> Tests whether this user is locked.
void	<a href="#"><u>setDepartment()</u></a> (String department) Sets the department of this user.
void	<a href="#"><u>setEmail()</u></a> (String email) Sets the email of this user.
void	<a href="#"><u>setExternalLoginId()</u></a> (String externalLoginId) Set the external login Id of this user.
void	<a href="#"><u>setFax()</u></a> (String fax) Sets the fax information of this user.
void	<a href="#"><u>setFirstName()</u></a> (String firstName) Sets the first name of this user.
void	<a href="#"><u>setGroupIds()</u></a> (String[] groupIds) Sets the ID of the group which this user is in.
void	<a href="#"><u>setId()</u></a> (Long id) Sets the ID of this user.
void	<a href="#"><u>setIsActive()</u></a> (Boolean isActive) Sets whether this user is active.
void	<a href="#"><u>setIsDefault()</u></a> (boolean isDefault)
void	<a href="#"><u>setLastName()</u></a> (String lastName) Sets the last name of this user.

void	<a href="#"><code>setLocked</code></a> (boolean locked) Sets whether this user is locked.
void	<a href="#"><code>setLogin</code></a> (String login) Sets the login name of this user.
void	<a href="#"><code>setMustChangePassword</code></a> (boolean mustChangePassword) Sets whether the password is required to change.
void	<a href="#"><code>setNotes</code></a> (String notes) Sets the notes of this user.
void	<a href="#"><code>setPagerNumber</code></a> (String pagerNumber) Sets the pager number of this user.
void	<a href="#"><code>setPassword</code></a> (String password) Sets the password of this user.
void	<a href="#"><code>setPhone</code></a> (String phone) Sets the phone number of this user.
void	<a href="#"><code>setScheduledWorkPeriods</code></a> (List scheduledWorkPeriods) Set the list of scheduled work periods.
void	<a href="#"><code>setTitle</code></a> (String title) Sets the title of this user.

Methods inherited from class `java.lang.Object`

`equals`, `getClass`, `hashCode`, `notify`, `notifyAll`, `toString`, `wait`, `wait`, `wait`

## Constructors

### User

```
public User()
```

Constructor

## Methods

### getId

```
public Long getId()
```

Gets the ID of this user.

**Returns:**

ID of this user.

## setId

```
public void setId(Long id)
```

Sets the ID of this user.

**Parameters:**

id - of this user.

id

---

## getGroupIds

```
public String[] getGroupIds()
```

Gets the IDs of the groups which this user is/was in.

**Returns:**

IDs of the groups which this user is/was in.

---

## setGroupIds

```
public void setGroupIds(String[] groupIds)
```

Sets the ID of the group which this user is in.

**Parameters:**

groupIds - ID of the group which this user is in.

---

## getLogin

```
public String getLogin()
```

Gets the login name of this user.

**Returns:**

The login name of this user.

---

## setLogin

```
public void setLogin(String login)
```

Sets the login name of this user.

**Parameters:**

login - The login name of this user.

---

## getFirstName

```
public String getFirstName()
```

Gets the first name of this user.

**Returns:**

The first name of this user.

---

---

## setFirstName

```
public void setFirstName(String firstName)
```

Sets the first name of this user.

**Parameters:**

`firstName` - The first name of this user.

---

## getLastName

```
public String getLastName()
```

Gets the last name of this user.

**Returns:**

The last name of this user.

---

## setLastName

```
public void setLastName(String lastName)
```

Sets the last name of this user.

**Parameters:**

`lastName` - The last name of this user.

---

## getEmail

```
public String getEmail()
```

Gets the email of this user.

**Returns:**

The email of this user.

---

## setEmail

```
public void setEmail(String email)
```

Sets the email of this user.

**Parameters:**

`email` - The email of this user.

---

## setPassword

```
public void setPassword(String password)
```

Sets the password of this user.

**Parameters:**

`password` - The password of this user.

---

---

## getIsActive

```
public Boolean getIsActive()
```

Tests whether this user is active.

**Returns:**

True if this user is active.

---

## setIsActive

```
public void setIsActive(Boolean isActive)
```

Sets whether this user is active.

**Parameters:**

`isActive` - If true, this user is active.

---

## getPhone

```
public String getPhone()
```

Gets the phone number of this user.

**Returns:**

The phone number of this user.

---

## setPhone

```
public void setPhone(String phone)
```

Sets the phone number of this user.

**Parameters:**

`phone` - The phone number of this user.

---

## getIsDefault

```
public boolean getIsDefault()
```

---

## setIsDefault

```
public void setIsDefault(boolean isDefault)
```

---

## getPassword

```
public String getPassword()
```

Gets the password of this user. **NOTE:** for API - business layer mapping only; not expected to be used by clients.

---

**Returns:**

The password of this user.

---

## **getExternalLoginId**

```
public String getExternalLoginId()
```

Get the external login Id of this user.

**Returns:**

The external login Id of this user.

---

## **setExternalLoginId**

```
public void setExternalLoginId(String externalLoginId)
```

Set the external login Id of this user.

**Parameters:**

`externalLoginId` - The external login Id to set for this user.

---

## **getMustChangePassword**

```
public boolean getMustChangePassword()
```

Tests whether the password is required to change.

**Returns:**

True if the password is required to change.

---

## **setMustChangePassword**

```
public void setMustChangePassword(boolean mustChangePassword)
```

Sets whether the password is required to change.

**Parameters:**

`mustChangePassword` - If true, the password is required to change.

---

## **getScheduledWorkPeriods**

```
public List getScheduledWorkPeriods()
```

Gets the list of scheduled work periods for this user.

**Returns:**

The list of scheduled work periods.

---

## **setScheduledWorkPeriods**

```
public void setScheduledWorkPeriods(List scheduledWorkPeriods)
```

Set the list of scheduled work periods.

---

**Parameters:**

`scheduledWorkPeriods` - The list of scheduled work periods to set

---

## getTitle

```
public String getTitle()
```

Gets the title of this user.

**Returns:**

The title of this user.

---

## setTitle

```
public void setTitle(String title)
```

Sets the title of this user.

**Parameters:**

`title` - The title of this user.

---

## getDepartment

```
public String getDepartment()
```

Gets the department of this user.

**Returns:**

The department of this user.

---

## setDepartment

```
public void setDepartment(String department)
```

Sets the department of this user.

**Parameters:**

`department` - The department of this user.

---

## getFax

```
public String getFax()
```

Gets the fax information of this user.

**Returns:**

The fax information of this user.

---

## setFax

```
public void setFax(String fax)
```

Sets the fax information of this user.

---

**Parameters:**

`fax` - The fax information of this user.

---

## **getPagerNumber**

```
public String getPagerNumber()
```

Gets the pager number of this user.

**Returns:**

The pager number of this user.

---

## **setPagerNumber**

```
public void setPagerNumber(String pagerNumber)
```

Sets the pager number of this user.

**Parameters:**

`pagerNumber` - The pager number of this user.

---

## **getNotes**

```
public String getNotes()
```

Gets the notes of this user.

**Returns:**

The notes of this user.

---

## **setNotes**

```
public void setNotes(String notes)
```

Sets the notes of this user.

**Parameters:**

`notes` - The notes of this user.

---

## **isLocked**

```
public boolean isLocked()
```

Tests whether this user is locked.

**Returns:**

True if this user is locked.

---

## **setLocked**

```
public void setLocked(boolean locked)
```

Sets whether this user is locked.

---

**Parameters:**

locked - If true, this user is locked.

## Constructors

### LoginServiceImpl

```
public LoginServiceImpl()
```

## Methods

### login

```
public LoginServiceLoginResponse login(String login,
    String password,
    HttpHeaders hh)
    throws ServiceException,
    AuthorizationException,
    AuthenticationException
```

Establishes a session using the specified login and password, and gets the string value of the auth-token which is valid throughout the life of the session.

If the provided information is enough to authenticate the user, the server sends back the authentication token. Otherwise this method throws an `ServiceException`. Check the error code of the exception to determine whether authentication failed or the server requested additional challenge if the error code equals to `RuntimeLoginException.LOGIN_CHALLENGE`. The ID of the additional challenge and key for the prompt string could be retrieved from exception's message that is prepared as `String.format("prompt=%s&id=%s", challengePromptKey, Integer.toString(challengeId))`. The client application is responsible for requesting additional information from the user for the challenge ID and sending the response back via another method `sendAuthChallengeResponse`.

#### Parameters:

login - The login user name  
password - The password of the login user  
hh - HTTP headers from http request

#### Returns:

The string value of auth-token to use for further calls otherwise

**Throws:**

[ServiceException](#) - if authentication failed or the server challenges with additional question  
[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated  
[com.arcsight.tools.coma.service.ServiceException](#) - For any errors happened during execution of this operation

**See Also:**

**GET**

```
URL: https://HOST:PORT/www/core-  
service/rest/LoginService/login?login=value&password=value  
Normal response code: 200
```

---

## loginPost

```
public LoginServiceLoginResponse loginPost(String login,  
      String password,  
      HttpHeaders hh)  
throws ServiceException,  
      AuthorizationException,  
      AuthenticationException
```

Establishes a session using the specified login and password, and gets the string value of the auth-token which is valid throughout the life of the session.

If the provided information is enough to authenticate the user, the server sends back the authentication token. Otherwise this method throws an [ServiceException](#). Check the error code of the exception to determine whether authentication failed or the server requested additional challenge if the error code equals to [RuntimeLoginException.LOGIN\\_CHALLENGE](#). The ID of the additional challenge and key for the prompt string could be retrieved from exception's message that is prepared as `String.format("prompt=%s&id=%s", challengePromptKey, Integer.toString(challengeId))`. The client application is responsible for requesting additional information from the user for the challenge ID and sending the response back via another method `sendAuthChallengeResponse`.

**Parameters:**

login - The login user name  
password - The password of the login user  
hh - HTTP headers from http request

**Returns:**

The string value of auth-token to use for further calls otherwise

**Throws:**

[ServiceException](#) - if authentication failed or the server challenges with additional question  
[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated

  "log.login" : {
    "log.login" : "value",
    "log.password" : "value"
  }
}
```

---

## login

```
public LoginServiceLoginResponse login(LoginServiceLogin value)
    throws ServiceException,
           AuthorizationException,
           AuthenticationException
```

Establishes a session using the specified login and password, and gets the string value of the auth-token which is valid throughout the life of the session.

If the provided information is enough to authenticate the user, the server sends back the authentication token. Otherwise this method throws an `ServiceException`. Check the error code of the exception to determine whether authentication failed or the server requested additional challenge if the error code equals to [RuntimeLoginException.LOGIN\\_CHALLENGE](#). The ID of the additional challenge and key for the prompt string could be retrieved from exception's message that is prepared as `String.format("prompt=%s&id=%s", challengePromptKey, Integer.toString(challengeId))`. The client application is responsible for requesting additional information from the user for the challenge ID and sending the response back via another method `sendAuthChallengeResponse`.

#### Parameters:

value - Model object containing request body

#### Returns:

The string value of auth-token to use for further calls otherwise

**Throws:**

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated  
[com.arcsight.tools.coma.service.ServiceException](#) - For any other errors happened during execution of this operation

**See Also:****POST**

```
Consumes({"application/xml", "text/xml", "application/json"})
URL: https://HOST:PORT/www/core-service/rest/LoginService/login
Normal response code: 200

**JSON prototype for request body:**

```
{
  "log.login" : {
    "log.login" : "value",
    "log.password" : "value"
  }
}
where:
  login The login user name
  password The password of the login user
```

---

## logout

```
public Void logout(String authToken,
    HttpHeaders hh)
    throws ServiceException,
    AuthorizationException,
    AuthenticationException
```

Drops the current session and its bound auth-token.

**Parameters:**

authToken - Authentication token created for the current session  
hh - HTTP headers from http request

**Throws:**

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated  
[com.arcsight.tools.coma.service.ServiceException](#) - For any errors happened during execution of this operation

**See Also:**

**GET**

```
URL: https://HOST:PORT/www/core-service/rest/LoginService/logout?authToken=value  
Normal response code: 204
```

---

## logoutPost

```
public Void logoutPost(String authToken,  
    HttpHeaders hh)  
throws ServiceException,  
    AuthorizationException,  
    AuthenticationException
```

Drops the current session and its bound auth-token.

**Parameters:**

authToken - Authentication token created for the current session  
hh - HTTP headers from http request

**Throws:**

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated

**See Also:**

## POST

```
Consumes({"application/x-www-form-urlencoded"})
URL: https://HOST:PORT/www/core-service/rest/LoginService/logout
Normal response code: 204
```

### JSON prototype for request body:

```
{
  "log.logout" : {
    "log.authToken" : "value"
  }
}
```

---

## logout

```
public Void logout(LoginServiceLogout value)
    throws ServiceException,
           AuthorizationException,
           AuthenticationException
```

Drops the current session and its bound auth-token.

### Parameters:

value - Model object containing request body

### Throws:

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated  
[com.arcsight.tools.coma.service.ServiceException](#) - For any other errors happened during execution of this operation

### See Also:

## POST

```
Consumes({"application/xml","text/xml","application/json"})
URL: https://HOST:PORT/www/core-service/rest/LoginService/logout
Normal response code: 204
```

### JSON prototype for request body:

```
{
  "log.logout" : {
    "log.authToken" : "value"
  }
}

where:
  authToken  Authentication token created for the current session
```

---

## getCurrentUser

```
public LoginServiceGetCurrentUserResponse getCurrentUser(String authToken,
    HttpHeaders hh)
    throws ServiceException,
    AuthorizationException,
    AuthenticationException
```

Returns the login user for the current session. If there is no User associated with the current session this method returns null.

### Parameters:

authToken - Authentication token created for the current session  
hh - HTTP headers from http request

### Returns:

The login user for the current session or null

### Throws:

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated

[com.arcsight.tools.coma.service.ServiceException](#) - For any errors happened during execution of this operation

#### See Also:

#### GET

```
URL: https://HOST:PORT/www/core-  
service/rest/LoginService/getCurrentUser?authToken=value  
Normal response code: 200
```

## getCurrentUserPost

```
public LoginServiceGetCurrentUserResponse getCurrentUserPost(String authToken,  
    HttpHeaders hh)  
    throws ServiceException,  
    AuthorizationException,  
    AuthenticationException
```

Returns the login user for the current session. If there is no User associated with the current session this method returns null.

#### Parameters:

`authToken` - Authentication token created for the current session  
`hh` - HTTP headers from http request

#### Returns:

The login user for the current session or null

#### Throws:

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated

#### See Also:

## POST

```
Consumes({"application/x-www-form-urlencoded"})
URL: https://HOST:PORT/www/core-service/rest/LoginService/getCurrentUser
Normal response code: 200
```

### JSON prototype for request body:

```
{
  "log.getCurrentUser" : {
    "log.authToken" : "value"
  }
}
```

---

## getCurrentUser

```
public LoginServiceGetCurrentUserResponse getCurrentUser(LoginServiceGetCurrentUser
value)
    throws ServiceException,
           AuthorizationException,
           AuthenticationException
```

Returns the login user for the current session. If there is no User associated with the current session this method returns null.

#### Parameters:

value - Model object containing request body

#### Returns:

The login user for the current session or null

#### Throws:

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated  
[com.arcsight.tools.coma.service.ServiceException](#) - For any other errors happened during execution of this operation

#### See Also:

## POST

```
Consumes({"application/xml","text/xml","application/json"})
URL: https://HOST:PORT/www/core-service/rest/LoginService/getCurrentUser
Normal response code: 200
```

### JSON prototype for request body:

```
{
  "log.getCurrentUser" : {
    "log.authToken" : "value"
  }
}

where:
  authToken  Authentication token created for the current session
```

---

## getSession

```
public LoginServiceGetSessionResponse getSession(String authToken,
    HttpHeaders hh)
    throws ServiceException,
    AuthorizationException,
    AuthenticationException
```

Returns the current session.

#### Parameters:

authToken - Authentication token created for the current session  
hh - HTTP headers from http request

#### Returns:

The current session.

#### Throws:

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated

[com.arcsight.tools.coma.service.ServiceException](#) - For any errors happened during execution of this operation

#### See Also:

#### GET

```
URL: https://HOST:PORT/www/core-service/rest/LoginService/getSession?authToken=value
Normal response code: 200
```

---

## getSessionPost

```
public LoginServiceGetSessionResponse getSessionPost(String authToken,
    HttpHeaders hh)
    throws ServiceException,
    AuthorizationException,
    AuthenticationException
```

Returns the current session.

#### Parameters:

`authToken` - Authentication token created for the current session  
`hh` - HTTP headers from http request

#### Returns:

The current session.

#### Throws:

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated

#### See Also:

## POST

```
Consumes({"application/x-www-form-urlencoded"})  
URL: https://HOST:PORT/www/core-service/rest/LoginService/getSession  
Normal response code: 200
```

### JSON prototype for request body:

```
{  
  "log.getSession" : {  
    "log.authToken" : "value"  
  }  
}
```

---

## getSession

```
public LoginServiceGetSessionResponse getSession(LoginServiceGetSession value)  
    throws ServiceException,  
           AuthorizationException,  
           AuthenticationException
```

Returns the current session.

#### Parameters:

value - Model object containing request body

#### Returns:

The current session.

#### Throws:

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated  
[com.arcsight.tools.coma.service.ServiceException](#) - For any other errors happened during execution of this operation

#### See Also:

## POST

```
Consumes({"application/xml","text/xml","application/json"})
URL: https://HOST:PORT/www/core-service/rest/LoginService/getSession
Normal response code: 200
```

### JSON prototype for request body:

```
{
  "log.getSession" : {
    "log.authToken" : "value"
  }
}

where:
  authToken  Authentication token created for the current session
```

---

## isCASAAuth

```
public LoginServiceIsCASAAuthResponse isCASAAuth(HttpHeaders hh)
    throws ServiceException,
           AuthorizationException,
           AuthenticationException
```

**Deprecated.** *Not implemented*

### Parameters:

hh - HTTP headers from http request

### Throws:

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated  
[com.arcsight.tools.coma.service.ServiceException](#) - For any errors happened during execution of this operation

---

## isCASAAuthPost

```
public LoginServiceIsCASAAuthResponse isCASAAuthPost(HttpHeaders hh)
    throws ServiceException,
           AuthorizationException,
           AuthenticationException
```

**Deprecated.** *Not implemented*

### Parameters:

hh - HTTP headers from http request

### Throws:

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated

---

## authenticate

```
public LoginServiceAuthenticateResponse authenticate(LoginServiceAuthenticate value)
    throws ServiceException,
           AuthorizationException,
           AuthenticationException
```

Authenticates the user with the given credentials. If this is a multi-step authentication, the authContext needs to be passed to indicate the session.

If the provided information is enough to authenticate the user, the server sends back an instance of AuthResponse containing the authentication token. Otherwise this method throws an ServiceException. Check the error code of the exception to determine whether authentication failed or the server requested additional challenge if the error code equals to [RuntimeLoginException.LOGIN\\_CHALLENGE](#). The ID of the additional challenge and key for the prompt string could be retrieved from exception's message that is prepared as `String.format("prompt=%s&id=%s", challengePromptKey, Integer.toString(challengeId))`. The client application is responsible for requesting additional information from the user for the challenge ID and sending the response back via another method `sendAuthChallengeResponse`.

### Parameters:

value - Model object containing request body

### Returns:

The response from the server, used to indicate if it was successful or more steps are required. Also contains the authToken to be used in further operations

### Throws:

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated  
[com.arcsight.tools.coma.service.ServiceException](#) - For any other errors happened during execution of this operation

### See Also:

## POST

```
Consumes({"application/xml","text/xml","application/json"})
URL: https://HOST:PORT/www/core-service/rest/LoginService/authenticate
Normal response code: 200
```

### JSON prototype for request body:

```
{
  "log.authenticate" : {
    "log.cred" : { "JSON for the" : "nested object" },
    "log.authContext" : { "JSON for the" : "nested object" }
  }
}

where:
  cred Credential to use to authenticate the user. Credential must match the
  AuthMethod being used.
  authContext The context in which the authentication is taking place. Can be null.
```

---

## sendAuthChallengeResponse

```
public LoginServiceSendAuthChallengeResponseResponse sendAuthChallengeResponse(int
challengeId,
    String resp,
    HttpHeaders hh)
throws ServiceException,
AuthorizationException,
AuthenticationException
```

Sends a response for the requested challenge back to JAAS CallbackHandler, which initiates that challenge. This method is to be called on behalf of a client (e.g. ArcSight Console) after the client receives the challenge `challengeId` and the user provides the response.

If the provided response is enough to authenticate the user, the server sends back an instance of `AuthResponse` containing the authentication token. Otherwise this method throws an `ServiceException`. Check the error code of the exception to determine whether the server requested another challenge if the error code equals to [RuntimeLoginException.LOGIN\\_CHALLENGE](#) or authentication failed. The ID of the additional challenge and key for the prompt string could be retrieved from exception's message that is prepared as `String.format("prompt=%s&id=%s", challengePromptKey, Integer.toString(challengeId))`.

**Parameters:**

`challengeId` - Identifier of a challenge send by JAAS authenticator  
`response` - User response to the challenge  
`hh` - HTTP headers from http request

**Returns:**

Authentication response which includes the authentication token

**Throws:**

`ServiceException` - if authentication failed or the server challenges with another question  
[`com.arcsight.coma.bridge.AuthorizationException`](#) - If the user is not authorized to perform this operation  
[`com.arcsight.coma.bridge.AuthenticationException`](#) - If the user is not authenticated  
[`com.arcsight.tools.coma.service.ServiceException`](#) - For any errors happened during execution of this operation

**See Also:****GET**

```
URL: https://HOST:PORT/www/core-  
service/rest/LoginService/sendAuthChallengeResponse?challengeId=value&resp=value  
Normal response code: 200
```

---

## sendAuthChallengeResponsePost

```
public LoginServiceSendAuthChallengeResponseResponse sendAuthChallengeResponsePost(int  
challengeId,  
    String resp,  
    HttpHeaders hh)  
throws ServiceException,  
    AuthorizationException,  
    AuthenticationException
```

Sends a response for the requested challenge back to JAAS CallbackHandler, which initiates that challenge. This method is to be called on behalf of a client (e.g. ArcSight Console) after the client receives the challenge `challengeId` and the user provides the response.

If the provided response is enough to authenticate the user, the server sends back an instance of `AuthResponse` containing the authentication token. Otherwise this method throws an `ServiceException`. Check the error code of the exception to determine whether the server requested another challenge if the error code equals to [`RuntimeLoginException.LOGIN\_CHALLENGE`](#) or authentication failed. The ID of the additional challenge and key for the prompt string could be retrieved from exception's message that is prepared as `String.format("prompt=%s&id=%s", challengePromptKey, Integer.toString(challengeId))`.

**Parameters:**

`challengeId` - Identifier of a challenge send by JAAS authenticator  
`response` - User response to the challenge  
`hh` - HTTP headers from http request

**Returns:**

Authentication response which includes the authentication token

**Throws:**

[ServiceException](#) - if authentication failed or the server challenges with another question

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation

[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated

**See Also:****POST**

```
Consumes({"application/x-www-form-urlencoded"})
```

```
URL: https://HOST:PORT/www/core-service/rest/LoginService/sendAuthChallengeResponse
```

```
Normal response code: 200
```

**JSON prototype for request body:**

```
{
  "log.sendAuthChallengeResponse" : {
    "log.challengeId" : "value",
    "log.resp" : "value"
  }
}
```

---

## sendAuthChallengeResponse

```
public LoginServiceSendAuthChallengeResponseResponse
sendAuthChallengeResponse(LoginServiceSendAuthChallengeResponse value)
    throws ServiceException,
           AuthorizationException,
           AuthenticationException
```

Sends a response for the requested challenge back to JAAS CallbackHandler, which initiates that challenge. This method is to be called on behalf of a client (e.g. ArcSight Console) after the client receives the challenge `challengeId` and the user provides the response.

If the provided response is enough to authenticate the user, the server sends back an instance of `AuthResponse` containing the authentication token. Otherwise this method throws an `ServiceException`. Check the error code of the exception to determine whether the server requested another challenge if the error code equals to `RuntimeLoginException.LOGIN_CHALLENGE` or authentication failed. The ID of the additional challenge and key for the prompt string could be retrieved from exception's message that is prepared as `String.format("prompt=%s&id=%s", challengePromptKey, Integer.toString(challengeId))`.

**Parameters:**

`value` - Model object containing request body

**Returns:**

Authentication response which includes the authentication token

**Throws:**

[`com.arcsight.coma.bridge.AuthorizationException`](#) - If the user is not authorized to perform this operation

[`com.arcsight.coma.bridge.AuthenticationException`](#) - If the user is not authenticated

[`com.arcsight.tools.coma.service.ServiceException`](#) - For any other errors happened during execution of this operation

**See Also:**

## POST

```
Consumes({"application/xml","text/xml","application/json"})
URL: https://HOST:PORT/www/core-service/rest/LoginService/sendAuthChallengeResponse
Normal response code: 200
```

### JSON prototype for request body:

```
{
  "log.sendAuthChallengeResponse" : {
    "log.challengeId" : "value",
    "log.resp" : "value"
  }
}

where:
  challengeId Identifier of a challenge send by JAAS authenticator
  response User response to the challenge
```

---

## getAuthenticationMethod

```
public LoginServiceGetAuthenticationMethodResponse getAuthenticationMethod(HttpHeaders
hh)
    throws ServiceException,
           AuthorizationException,
           AuthenticationException
```

Gets the method that applications should use to authenticate users.

#### Parameters:

hh - HTTP headers from http request

#### Returns:

The Auth

#### Throws:

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation

[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated  
[com.arcsight.tools.coma.service.ServiceException](#) - For any errors happened during execution of this operation

**See Also:**

**GET**

```
URL: https://HOST:PORT/www/core-service/rest/LoginService/getAuthenticationMethod?  
Normal response code: 200
```

---

## getAuthenticationMethodPost

```
public LoginServiceGetAuthenticationMethodResponse  
getAuthenticationMethodPost(HttpHeaders hh)  
    throws ServiceException,  
           AuthorizationException,  
           AuthenticationException
```

Gets the method that applications should use to authenticate users.

**Parameters:**

hh - HTTP headers from http request

**Returns:**

The Auth

**Throws:**

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated

**See Also:**

## POST

```
Consumes({"application/x-www-form-urlencoded"})
URL: https://HOST:PORT/www/core-service/rest/LoginService/getAuthenticationMethod
Normal response code: 200
```

### JSON prototype for request body:

```
{
  "log.getAuthenticationMethod" : {

  }
}
```

---

## loginForOneTimeUse

```
public LoginServiceLoginForOneTimeUseResponse loginForOneTimeUse(String login,
    String password,
    HttpHeaders hh)
    throws ServiceException,
    AuthorizationException,
    AuthenticationException
```

Establishes a session which can only be used once subsequent to its creation, and gets the string value of auth-token which is valid throughout the life of the session.

If the provided information is enough to authenticate the user, the server sends back the authentication token. Otherwise this method throws an [ServiceException](#). Check the error code of the exception to determine whether authentication failed or the server requested additional challenge if the error code equals to [RuntimeLoginException.LOGIN\\_CHALLENGE](#). The ID of the additional challenge and key for the prompt string could be retrieved from exception's message that is prepared as `String.format("prompt=%s&id=%s", challengePromptKey, Integer.toString(challengeId))`. The client application is responsible for requesting additional information from the user for the challenge ID and sending the response back via another method `sendAuthChallengeResponse`.

### Parameters:

`login` - The login user name.  
`password` - The password of the login user.  
`hh` - HTTP headers from http request

### Returns:

The string value of auth-token to use for further calls otherwise.

**Throws:**

[ServiceException](#) - if authentication failed or the server challenges with additional question  
[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated  
[com.arcsight.tools.coma.service.ServiceException](#) - For any errors happened during execution of this operation

**See Also:**

**GET**

```
URL: https://HOST:PORT/www/core-  
service/rest/LoginService/loginForOneTimeUse?login=value&password=value  
Normal response code: 200
```

---

## loginForOneTimeUsePost

```
public LoginServiceLoginForOneTimeUseResponse loginForOneTimeUsePost(String login,  
    String password,  
    HttpHeaders hh)  
throws ServiceException,  
    AuthorizationException,  
    AuthenticationException
```

Establishes a session which can only be used once subsequent to its creation, and gets the string value of auth-token which is valid throughout the life of the session.

If the provided information is enough to authenticate the user, the server sends back the authentication token. Otherwise this method throws an [ServiceException](#). Check the error code of the exception to determine whether authentication failed or the server requested additional challenge if the error code equals to [RuntimeLoginException.LOGIN\\_CHALLENGE](#). The ID of the additional challenge and key for the prompt string could be retrieved from exception's message that is prepared as `String.format("prompt=%s&id=%s", challengePromptKey, Integer.toString(challengeId))`. The client application is responsible for requesting additional information from the user for the challenge ID and sending the response back via another method `sendAuthChallengeResponse`.

**Parameters:**

login - The login user name.  
password - The password of the login user.  
hh - HTTP headers from http request

**Returns:**

The string value of auth-token to use for further calls otherwise.

**Throws:**

[ServiceException](#) - if authentication failed or the server challenges with additional question  
[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated

See Also:

## POST

```
Consumes({"application/x-www-form-urlencoded"})
URL: https://HOST:PORT/www/core-service/rest/LoginService/loginForOneTimeUse
Normal response code: 200
```

### JSON prototype for request body:

```
{
  "log.loginForOneTimeUse" : {
    "log.login" : "value",
    "log.password" : "value"
  }
}
```

---

## loginForOneTimeUse

```
public LoginServiceLoginForOneTimeUseResponse
loginForOneTimeUse (LoginServiceLoginForOneTimeUse value)
    throws ServiceException,
           AuthorizationException,
           AuthenticationException
```

Establishes a session which can only be used once subsequent to its creation, and gets the string value of auth-token which is valid throughout the life of the session.

If the provided information is enough to authenticate the user, the server sends back the authentication token. Otherwise this method throws an `ServiceException`. Check the error code of the exception to determine whether authentication failed or the server requested additional challenge if the error code equals to [RuntimeLoginException.LOGIN\\_CHALLENGE](#). The ID of the additional challenge and key for the prompt string could be retrieved from exception's message that is prepared as `String.format("prompt=%s&id=%s", challengePromptKey, Integer.toString(challengeId))`. The client application is responsible for requesting additional information from the user for the challenge ID and sending the response back via another method `sendAuthChallengeResponse`.

### Parameters:

value - Model object containing request body

### Returns:

The string value of auth-token to use for further calls otherwise.

**Throws:**

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated  
[com.arcsight.tools.coma.service.ServiceException](#) - For any other errors happened during execution of this operation

**See Also:**

**POST**

```
Consumes({"application/xml", "text/xml", "application/json"})
URL: https://HOST:PORT/www/core-service/rest/LoginService/loginForOneTimeUse
Normal response code: 200
```

**JSON prototype for request body:**

```
{
  "log.loginForOneTimeUse" : {
    "log.login" : "value",
    "log.password" : "value"
  }
}
where:
  login The login user name.
  password The password of the login user.
```

---

## resetPassword

```
public Void resetPassword(String login,
    HttpHeaders hh)
    throws ServiceException,
    AuthorizationException,
    AuthenticationException
```

Resets the password for the user specified by the login userName. The ArcSight Manager assigns a new random password (8 characters, including numbers and letters) and sends it to the selected user's assigned e-mail address. Please note that this feature needs to be configured as per ESM User's guide.

**Parameters:**

login - User name associated with the account.  
hh - HTTP headers from http request

**Throws:**

[ServiceException](#)  
[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated  
[com.arcsight.tools.coma.service.ServiceException](#) - For any errors happened during execution of this operation

**See Also:**

**GET**

URL: <https://HOST:PORT/www/core-service/rest/LoginService/resetPassword?login=value>  
Normal response code: 204

---

## resetPasswordPost

```
public Void resetPasswordPost(String login,  
    HttpHeaders hh)  
throws ServiceException,  
    AuthorizationException,  
    AuthenticationException
```

Resets the password for the user specified by the login userName. The ArcSight Manager assigns a new random password (8 characters, including numbers and letters) and sends it to the selected user's assigned e-mail address. Please note that this feature needs to be configured as per ESM User's guide.

**Parameters:**

login - User name associated with the account.  
hh - HTTP headers from http request

**Throws:**

[ServiceException](#)  
[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated

**See Also:**

## POST

```
Consumes({"application/x-www-form-urlencoded"})  
URL: https://HOST:PORT/www/core-service/rest/LoginService/resetPassword  
Normal response code: 204
```

### JSON prototype for request body:

```
{  
  "log.resetPassword" : {  
    "log.login" : "value"  
  }  
}
```

---

## resetPassword

```
public Void resetPassword(LoginServiceResetPassword value)  
    throws ServiceException,  
           AuthorizationException,  
           AuthenticationException
```

Resets the password for the user specified by the login userName. The ArcSight Manager assigns a new random password (8 characters, including numbers and letters) and sends it to the selected user's assigned e-mail address. Please note that this feature needs to be configured as per ESM User's guide.

#### Parameters:

value - Model object containing request body

#### Throws:

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated  
[com.arcsight.tools.coma.service.ServiceException](#) - For any other errors happened during execution of this operation

#### See Also:

## POST

```
Consumes({"application/xml","text/xml","application/json"})
URL: https://HOST:PORT/www/core-service/rest/LoginService/resetPassword
Normal response code: 204
```

### JSON prototype for request body:

```
{
  "log.resetPassword" : {
    "log.login" : "value"
  }
}
where:
  login User name associated with the account.
```

---

## getServiceMajorVersion

```
public LoginServiceGetServiceMajorVersionResponse getServiceMajorVersion(String
authToken,
    HttpHeaders hh)
throws ServiceException,
AuthorizationException,
AuthenticationException
```

The major version of this service.

### Parameters:

authToken - Authentication token created for the current session  
hh - HTTP headers from http request

### Throws:

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated  
[com.arcsight.tools.coma.service.ServiceException](#) - For any errors happened during execution of this operation

## See Also:

### GET

```
URL: https://HOST:PORT/www/core-  
service/rest/LoginService/getServiceMajorVersion?authToken=value  
Normal response code: 200
```

---

## getServiceMajorVersionPost

```
public LoginServiceGetServiceMajorVersionResponse getServiceMajorVersionPost (String  
authToken,  
    HttpHeaders hh)  
throws ServiceException,  
    AuthorizationException,  
    AuthenticationException
```

The major version of this service.

### Parameters:

authToken - Authentication token created for the current session  
hh - HTTP headers from http request

### Throws:

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated

## See Also:

## POST

```
Consumes({"application/x-www-form-urlencoded"})
URL: https://HOST:PORT/www/core-service/rest/LoginService/getServiceMajorVersion
Normal response code: 200
```

### JSON prototype for request body:

```
{
  "log.getServiceMajorVersion" : {
    "log.authToken" : "value"
  }
}
```

---

## getServiceMajorVersion

```
public LoginServiceGetServiceMajorVersionResponse
getServiceMajorVersion(LoginServiceGetServiceMajorVersion value)
    throws ServiceException,
           AuthorizationException,
           AuthenticationException
```

The major version of this service.

#### Parameters:

value - Model object containing request body

#### Throws:

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated  
[com.arcsight.tools.coma.service.ServiceException](#) - For any other errors happened during execution of this operation

#### See Also:

## POST

```
Consumes({"application/xml","text/xml","application/json"})
URL: https://HOST:PORT/www/core-service/rest/LoginService/getServiceMajorVersion
Normal response code: 200
```

### JSON prototype for request body:

```
{
  "log.getServiceMajorVersion" : {
    "log.authToken" : "value"
  }
}

where:
  authToken  Authentication token created for the current session
```

---

## getServiceMinorVersion

```
public LoginServiceGetServiceMinorVersionResponse getServiceMinorVersion(String
authToken,
    HttpHeaders hh)
throws ServiceException,
AuthorizationException,
AuthenticationException
```

The minor version of this service.

### Parameters:

authToken - Authentication token created for the current session  
hh - HTTP headers from http request

### Throws:

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated  
[com.arcsight.tools.coma.service.ServiceException](#) - For any errors happened during execution of this operation

## See Also:

### GET

```
URL: https://HOST:PORT/www/core-  
service/rest/LoginService/getServiceMinorVersion?authToken=value  
Normal response code: 200
```

---

## getServiceMinorVersionPost

```
public LoginServiceGetServiceMinorVersionResponse getServiceMinorVersionPost (String  
authToken,  
    HttpHeaders hh)  
throws ServiceException,  
    AuthorizationException,  
    AuthenticationException
```

The minor version of this service.

### Parameters:

authToken - Authentication token created for the current session  
hh - HTTP headers from http request

### Throws:

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated

## See Also:

## POST

```
Consumes({"application/x-www-form-urlencoded"})
URL: https://HOST:PORT/www/core-service/rest/LoginService/getServiceMinorVersion
Normal response code: 200
```

### JSON prototype for request body:

```
{
  "log.getServiceMinorVersion" : {
    "log.authToken" : "value"
  }
}
```

---

## getServiceMinorVersion

```
public LoginServiceGetServiceMinorVersionResponse
getServiceMinorVersion(LoginServiceGetServiceMinorVersion value)
throws ServiceException,
AuthorizationException,
AuthenticationException
```

The minor version of this service.

### Parameters:

value - Model object containing request body

### Throws:

[com.arcsight.coma.bridge.AuthorizationException](#) - If the user is not authorized to perform this operation  
[com.arcsight.coma.bridge.AuthenticationException](#) - If the user is not authenticated  
[com.arcsight.tools.coma.service.ServiceException](#) - For any other errors happened during execution of this operation

### See Also:

## POST

```
Consumes({"application/xml","text/xml","application/json"})  
URL: https://HOST:PORT/www/core-service/rest/LoginService/getServiceMinorVersion  
Normal response code: 200
```

### JSON prototype for request body:

```
{  
  "log.getServiceMinorVersion" : {  
    "log.authToken" : "value"  
  }  
}  
where:  
  authToken  Authentication token created for the current session
```

Package

**com.arcsight.tools.coma.service**

# com.arcsight.tools.coma.service

## Class RuntimeCodedException

```
java.lang.Object
├-- java.lang.Throwable
│   ├── java.lang.Exception
│   │   ├── java.lang.RuntimeException
│   │   └-- com.arcsight.tools.coma.service.RuntimeCodedException
```

All Implemented Interfaces:  
Serializable

Direct Known Subclasses:  
[RuntimeLoginException](#)

---

```
public class RuntimeCodedException
extends RuntimeException
```

Base class for various internal runtime exceptions that may happen while communicating from service layer with internal ESM classes.

---

### Constructor Summary

public	<a href="#">RuntimeCodedException()</a> Constructs a new runtime exception with <code>null</code> as its detail message.
public	<a href="#">RuntimeCodedException(String message)</a> Constructs a new runtime exception with the specified detail message.
public	<a href="#">RuntimeCodedException(Throwable cause)</a> Constructs a new runtime exception with the specified cause and a detail message of <code>(cause==null ? null : cause.toString())</code> (which typically contains the class and detail message of cause).
public	<a href="#">RuntimeCodedException(String message, Throwable cause)</a> Constructs a new runtime exception with the specified detail message and cause.
public	<a href="#">RuntimeCodedException(int errorCode)</a> Constructs a new exception with the specified error code

### Method Summary

int	<a href="#">getErrorCode()</a> Returns the error code associated with this exception.
void	<a href="#">setErrorCode(int errorCode)</a> Associates the error code with the exception.

Methods inherited from class `java.lang.Throwable`

---

```
fillInStackTrace, getCause, getLocalizedMessage, getMessage, getStackTrace, initCause,
printStackTrace, printStackTrace, printStackTrace, setStackTrace, toString
```

Methods inherited from class `java.lang.Object`

```
equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait
```

## Constructors

### RuntimeCodedException

```
public RuntimeCodedException()
```

Constructs a new runtime exception with `null` as its detail message.

### RuntimeCodedException

```
public RuntimeCodedException(String message)
```

Constructs a new runtime exception with the specified detail message.

**Parameters:**

`message` - the detail message.

### RuntimeCodedException

```
public RuntimeCodedException(Throwable cause)
```

Constructs a new runtime exception with the specified cause and a detail message of `(cause==null ? null : cause.toString())` (which typically contains the class and detail message of cause). This constructor is useful for runtime exceptions that are little more than wrappers for other throwables.

**Parameters:**

`cause` - the cause (which is saved for later retrieval by the `Throwable.getCause()` method). (A null value is permitted, and indicates that the cause is nonexistent or unknown.)

### RuntimeCodedException

```
public RuntimeCodedException(String message,
                             Throwable cause)
```

Constructs a new runtime exception with the specified detail message and cause.

Note that the detail message associated with `cause` is *not* automatically incorporated in this runtime exception's detail message.

**Parameters:**

`message` - the detail message (which is saved for later retrieval by the `Throwable.getMessage()` method).

`cause` - the cause (which is saved for later retrieval by the `Throwable.getCause()` method). (A null value is permitted, and indicates that the cause is nonexistent or unknown.)

## RuntimeCodedException

```
public RuntimeCodedException(int errorCode)
```

Constructs a new exception with the specified error code

**Parameters:**

`errorCode` - error code identifying the exceptional case

## Methods

### getErrorCode

```
public int getErrorCode()
```

Returns the error code associated with this exception. The error code is set when the exception thrown and it indicates the failure or irregular situation.

**Returns:**

the `errorCode`

---

### setErrorCode

```
public void setErrorCode(int errorCode)
```

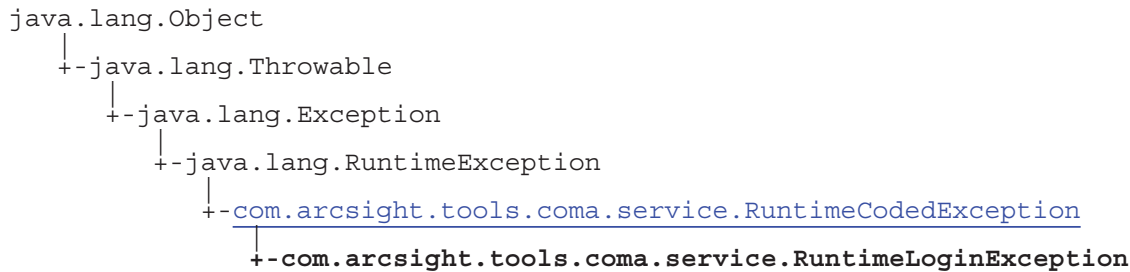

Associates the error code with the exception.

**Parameters:**

`errorCode` - The `errorCode` to set

# com.arcsight.tools.coma.service

## Class RuntimeException

All Implemented Interfaces:  
Serializable

public class **RuntimeLoginException**  
extends [RuntimeCodedException](#)

Exception thrown for authentication issues. It doesn't necessarily means failure. The exception could indicate a request for additional information (challenge).  
This is internal exception not returned by API calls. To report related exceptional cases to the clients API converts this exception to [ServiceLoginException](#)

Field Summary	
public static final	<a href="#">LOGIN_CHALLENGE</a> Indicates additional challenge requested by the server. Value: -4
public static final	<a href="#">LOGIN_ERROR_FAILURE</a> Indicates login failure. Value: 0
public static final	<a href="#">LOGIN_ERROR_LICENSE_EXPIRED</a> Indicates an expired license. Value: -1
public static final	<a href="#">LOGIN_ERROR_PASSWORD_EXPIRED</a> Indicates expired password. Value: -3
public static final	<a href="#">LOGIN_ERROR_USER_DISABLED</a> Indicates the fact that user account was disabled. Value: -2
public static final	<a href="#">LOGIN_ERROR_USER_NOT_ALLOWED</a> Indicates that the user doesn't have permission to access the component. Value: -5

## Constructor Summary

public	<a href="#">RuntimeLoginException()</a> Constructs a new runtime exception with <code>null</code> as its detail message.
public	<a href="#">RuntimeLoginException(String message)</a> Constructs a new runtime exception with the specified detail message.
public	<a href="#">RuntimeLoginException(Throwable cause)</a> Constructs a new runtime exception with the specified cause and a detail message of <code>(cause==null ? null : cause.toString())</code> (which typically contains the class and detail message of cause).
public	<a href="#">RuntimeLoginException(String message, Throwable cause)</a> Constructs a new runtime exception with the specified detail message and cause.
public	<a href="#">RuntimeLoginException(int errorCode)</a>

### Methods inherited from class [com.arcsight.tools.coma.service.RuntimeCodedException](#)

[getErrorCode](#), [setErrorCode](#)

### Methods inherited from class `java.lang.Throwable`

`fillInStackTrace`, `getCause`, `getLocalizedMessage`, `getMessage`, `getStackTrace`, `initCause`, `printStackTrace`, `printStackTrace`, `printStackTrace`, `setStackTrace`, `toString`

### Methods inherited from class `java.lang.Object`

`equals`, `getClass`, `hashCode`, `notify`, `notifyAll`, `toString`, `wait`, `wait`, `wait`

## Fields

### LOGIN\_ERROR\_FAILURE

```
public static final int LOGIN_ERROR_FAILURE
```

Indicates login failure.  
Constant value: 0

### LOGIN\_ERROR\_LICENSE\_EXPIRED

```
public static final int LOGIN_ERROR_LICENSE_EXPIRED
```

Indicates an expired license.  
Constant value: -1

### LOGIN\_ERROR\_USER\_DISABLED

```
public static final int LOGIN_ERROR_USER_DISABLED
```

Indicates the fact that user account was disabled.

Constant value: - 2

---

## LOGIN\_ERROR\_PASSWORD\_EXPIRED

```
public static final int LOGIN_ERROR_PASSWORD_EXPIRED
```

Indicates expired password.  
Constant value: - 3

---

## LOGIN\_CHALLENGE

```
public static final int LOGIN_CHALLENGE
```

Indicates additional challenge requested by the server. Login cannot be completed until the user to meet the challenge.  
Constant value: - 4

---

## LOGIN\_ERROR\_USER\_NOT\_ALLOWED

```
public static final int LOGIN_ERROR_USER_NOT_ALLOWED
```

Indicates that the user doesn't have permission to access the component.  
Constant value: - 5

---

## Constructors

### RuntimeLoginException

```
public RuntimeLoginException()
```

Constructs a new runtime exception with `null` as its detail message.

---

### RuntimeLoginException

```
public RuntimeLoginException(String message)
```

Constructs a new runtime exception with the specified detail message.

**Parameters:**

`message` - the detail message.

---

### RuntimeLoginException

```
public RuntimeLoginException(Throwable cause)
```

Constructs a new runtime exception with the specified cause and a detail message of `(cause==null ? null : cause.toString())` (which typically contains the class and detail message of cause). This constructor is useful for runtime exceptions that are little more than wrappers for other throwables.

**Parameters:**

`cause` - the cause (which is saved for later retrieval by the `Throwable.getCause()` method). (A null value is permitted, and indicates that the cause is nonexistent or unknown.)

---

## RuntimeLoginException

```
public RuntimeLoginException(String message,  
                             Throwable cause)
```

Constructs a new runtime exception with the specified detail message and cause.

Note that the detail message associated with `cause` is *not* automatically incorporated in this runtime exception's detail message.

### Parameters:

`message` - the detail message (which is saved for later retrieval by the `Throwable.getMessage()` method).

`cause` - the cause (which is saved for later retrieval by the `Throwable.getCause()` method). (A null value is permitted, and indicates that the cause is nonexistent or unknown.)

---

## RuntimeLoginException

```
public RuntimeLoginException(int errorCode)
```

# com.arcsight.tools.coma.service Interface Service

All Known Implementing Classes:  
[ServiceBase](#)

public interface **Service**  
extends

Base interface for services.

Method Summary		
	int	<a href="#">getServiceMajorVersion()</a> The major version of this service.
	int	<a href="#">getServiceMinorVersion()</a> The minor version of this service.

## Methods

### getServiceMajorVersion

public int **getServiceMajorVersion()**

The major version of this service.

**Returns:**  
The major version of this service.

### getServiceMinorVersion

public int **getServiceMinorVersion()**

The minor version of this service.

**Returns:**  
The minor version of this service.

# com.arcsight.tools.coma.service

## Class ServiceBase

```
java.lang.Object
|
+-com.arcsight.tools.coma.service.ServiceBase
```

All Implemented Interfaces:  
[Service](#)

public abstract class **ServiceBase**  
extends **Object**  
implements [Service](#)

Base service implementation.

### Constructor Summary

public	<a href="#">ServiceBase()</a>
--------	-------------------------------

### Method Summary

int	<a href="#">getServiceMajorVersion()</a>
int	<a href="#">getServiceMinorVersion()</a>

Methods inherited from class java.lang.Object
<code>equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait</code>

Methods inherited from interface <a href="#">com.arcsight.tools.coma.service.Service</a>
<a href="#">getServiceMajorVersion</a> , <a href="#">getServiceMinorVersion</a>

### Constructors

**ServiceBase**  
`public ServiceBase()`

### Methods

## **getServiceMajorVersion**

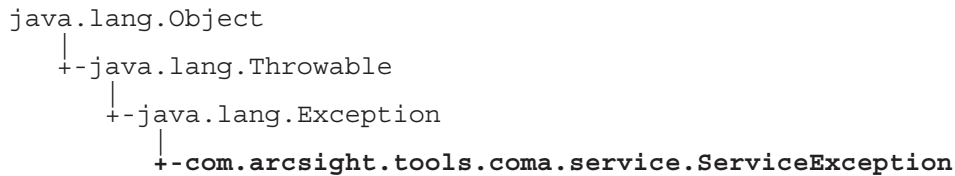

```
public int getServiceMajorVersion()
```

---

## **getServiceMinorVersion**

```
public int getServiceMinorVersion()
```

# com.arcsight.tools.coma.service Class ServiceException

All Implemented Interfaces:  
Serializable, Serializable

Direct Known Subclasses:  
[ValidationException](#), [ServiceLoginException](#)

public class **ServiceException**  
extends Exception  
implements Serializable, Serializable

This is exception for kahuna/coma service. There are several reasons to have special exception impl: 1. Make it serializable so all service binding can marshal it 2. Due to the known GWT marshaling issue, parent message can not be marshaled we have to duplicated parent instance variables in this class.

Field Summary	
public static final	<a href="#">ERROR_UNKNOWN</a> Value: -54188

Constructor Summary	
public	<a href="#">ServiceException</a> () Constructs a new exception with null as its detail message.
public	<a href="#">ServiceException</a> (String message) Constructs a new exception with the specified detail message.
public	<a href="#">ServiceException</a> (Throwable cause) Constructs a new exception with the specified cause and a detail message of (cause==null ? null : cause.toString()) (which typically contains the class and detail message of cause).
public	<a href="#">ServiceException</a> (String message, Throwable cause) Constructs a new exception with the specified detail message and cause.

Method Summary	
static String	<a href="#">buildExceptionStackTraceString</a> (Throwable e) It builds a string for stack trace of an exception.

static <a href="#">ServiceException</a>	<a href="#">createServiceException</a> (Throwable e) It creates an exception which is serializable.
int	<a href="#">getErrorCode</a> () Returns the error code associated with this exception.
void	<a href="#">setErrorCode</a> (int errorCode) Associates the error code with the exception.

#### Methods inherited from class java.lang.Throwable

fillInStackTrace, getCause, getLocalizedMessage, getMessage, getStackTrace, initCause, printStackTrace, printStackTrace, printStackTrace, setStackTrace, toString

#### Methods inherited from class java.lang.Object

equals, getClass, hashCode, notify, notifyAll, toString, wait, wait, wait

## Fields

### ERROR\_UNKNOWN

```
public static final int ERROR_UNKNOWN
```

Constant value: -54188

## Constructors

### ServiceException

```
public ServiceException()
```

Constructs a new exception with `null` as its detail message. The cause is not initialized, and may subsequently be initialized by a call to `Throwable.initCause(java.lang.Throwable)`.

### ServiceException

```
public ServiceException(String message)
```

Constructs a new exception with the specified detail message. The cause is not initialized, and may subsequently be initialized by a call to `Throwable.initCause(java.lang.Throwable)`.

#### Parameters:

`message` - the detail message. The detail message is saved for later retrieval by the `Throwable.getMessage()` method.

### ServiceException

```
public ServiceException(Throwable cause)
```

Constructs a new exception with the specified cause and a detail message of (cause==null ? null : cause.toString()) (which typically contains the class and detail message of cause). This constructor is useful for exceptions that are little more than wrappers for other throwables (for example, `java.security.PrivilegedActionException`).

**Parameters:**

`cause` - the cause (which is saved for later retrieval by the `Throwable.getCause()` method). (A null value is permitted, and indicates that the cause is nonexistent or unknown.)

---

## ServiceException

```
public ServiceException(String message,  
                        Throwable cause)
```

Constructs a new exception with the specified detail message and cause.

Note that the detail message associated with `cause` is *not* automatically incorporated in this exception's detail message.

**Parameters:**

`message` - the detail message (which is saved for later retrieval by the `Throwable.getMessage()` method).

`cause` - the cause (which is saved for later retrieval by the `Throwable.getCause()` method). (A null value is permitted, and indicates that the cause is nonexistent or unknown.)

## Methods

### buildExceptionStackTraceString

```
public static String buildExceptionStackTraceString(Throwable e)
```

It builds a string for stack trace of an exception. It is used for debugging log.

**Parameters:**

`e`

**Returns:**

---

### createServiceException

```
public static ServiceException createServiceException(Throwable e)
```

It creates an exception which is serializable. Some of the throwables, such as `NullPointerException`, are not serializable. They will cause serialization error when they are wrapped in service exception. This approach wraps all stack traces as string in service exception.

**Parameters:**

`e`

**Returns:**

---

### getErrorCode

```
public int getErrorCode()
```

Returns the error code associated with this exception. The error code is set when the exception thrown and it indicates the failure or irregular situation.

**Returns:**  
the errorCode

---

## **setErrorCode**

```
public void setErrorCode(int errorCode)
```

Associates the error code with the exception.

**Parameters:**  
errorCode - The errorCode to set

# com.arcsight.tools.coma.service

## Class ServiceLoginException

```
java.lang.Object
|
+-java.lang.Throwable
|
+-java.lang.Exception
|
+-com.arcsight.tools.coma.service.ServiceException
|
+-com.arcsight.tools.coma.service.ServiceLoginException
```

All Implemented Interfaces:  
Serializable, Serializable

public class **ServiceLoginException**  
extends [ServiceException](#)

Exception thrown for authentication issues. It doesn't necessarily means failure. The exception could indicate a request for additional information (challenge).

Field Summary	
public static final	<a href="#">LOGIN_ERROR_FAILURE</a> Indicates login failure. Value: 0
public static final	<a href="#">LOGIN_ERROR_LICENSE_EXPIRED</a> Indicates an expired license. Value: -1
public static final	<a href="#">LOGIN_ERROR_USER_DISABLED</a> Indicates the fact that user account was disabled. Value: -2
public static final	<a href="#">LOGIN_ERROR_USER_NOT_ALLOWED</a> Indicates that the user doesn't have permission to access the component. Value: -5
Fields inherited from class <a href="#">com.arcsight.tools.coma.service.ServiceException</a>	
<a href="#">ERROR_UNKNOWN</a>	
Constructor Summary	
public	<a href="#">ServiceLoginException()</a> Constructs a new exception with null as its detail message.
public	<a href="#">ServiceLoginException(String message)</a> Constructs a new exception with the specified detail message.

public	<a href="#">ServiceLoginException</a> (Throwable cause) Constructs a new exception with the specified cause and a detail message of (cause==null ? null : cause.toString()) (which typically contains the class and detail message of cause).
public	<a href="#">ServiceLoginException</a> (String message, Throwable cause) Constructs a new exception with the specified detail message and cause.
public	<a href="#">ServiceLoginException</a> (int errorCode) Constructs a new exception with the specified error code

## Fields

### LOGIN\_ERROR\_FAILURE

```
public static final int LOGIN_ERROR_FAILURE
```

Indicates login failure.  
Constant value: 0

### LOGIN\_ERROR\_LICENSE\_EXPIRED

```
public static final int LOGIN_ERROR_LICENSE_EXPIRED
```

Indicates an expired license.  
Constant value: -1

### LOGIN\_ERROR\_USER\_DISABLED

```
public static final int LOGIN_ERROR_USER_DISABLED
```

Indicates the fact that user account was disabled.  
Constant value: -2

### LOGIN\_ERROR\_USER\_NOT\_ALLOWED

```
public static final int LOGIN_ERROR_USER_NOT_ALLOWED
```

Indicates that the user doesn't have permission to access the component.  
Constant value: -5

# Constructors

## ServiceLoginException

```
public ServiceLoginException()
```

Constructs a new exception with `null` as its detail message. The cause is not initialized, and may subsequently be initialized by a call to `Throwable.initCause(java.lang.Throwable)`.

---

## ServiceLoginException

```
public ServiceLoginException(String message)
```

Constructs a new exception with the specified detail message. The cause is not initialized, and may subsequently be initialized by a call to `Throwable.initCause(java.lang.Throwable)`.

**Parameters:**

`message` - the detail message. The detail message is saved for later retrieval by the `Throwable.getMessage()` method.

---

## ServiceLoginException

```
public ServiceLoginException(Throwable cause)
```

Constructs a new exception with the specified cause and a detail message of `(cause==null ? null : cause.toString())` (which typically contains the class and detail message of cause). This constructor is useful for exceptions that are little more than wrappers for other throwables (for example, `java.security.PrivilegedActionException`).

**Parameters:**

`cause` - the cause (which is saved for later retrieval by the `Throwable.getCause()` method). (A null value is permitted, and indicates that the cause is nonexistent or unknown.)

---

## ServiceLoginException

```
public ServiceLoginException(String message,  
                             Throwable cause)
```

Constructs a new exception with the specified detail message and cause.

Note that the detail message associated with `cause` is *not* automatically incorporated in this exception's detail message.

**Parameters:**

`message` - the detail message (which is saved for later retrieval by the `Throwable.getMessage()` method).  
`cause` - the cause (which is saved for later retrieval by the `Throwable.getCause()` method). (A null value is permitted, and indicates that the cause is nonexistent or unknown.)

---

## ServiceLoginException

```
public ServiceLoginException(int errorCode)
```

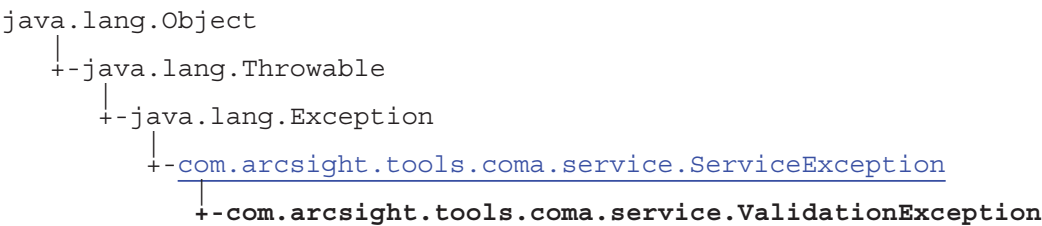

Constructs a new exception with the specified error code

**Parameters:**

`errorCode` - error code identifying the exceptional case

# com.arcsight.tools.coma.service Class ValidationException

All Implemented Interfaces:  
Serializable, Serializable

public class **ValidationException**  
extends [ServiceException](#)

Base class for various validation exceptions to indicate failures to validate different types of data (e.g. password).

Fields inherited from class <a href="#">com.arcsight.tools.coma.service.ServiceException</a>
<a href="#">ERROR_UNKNOWN</a>

Constructor Summary	
public	<a href="#">ValidationException()</a> Constructs a new exception with null as its detail message.
public	<a href="#">ValidationException(String message)</a> Constructs a new exception with the specified detail message.
public	<a href="#">ValidationException(String message, Map validationErrors)</a> Constructs a new exception with the specified detail message and a map containing error descriptions.

Method Summary	
String	<a href="#">getLocalizedMessage()</a>
String	<a href="#">getMessage()</a>
Map	<a href="#">getValidationErrors()</a> Returns validationErrors, which is a map of errors found for different items.
void	<a href="#">setValidationErrors(Map validationErrors)</a> Sets the validationErrors.
String	<a href="#">toString()</a>

Methods inherited from class [com.arcsight.tools.coma.service.ServiceException](#)

[buildExceptionStackTraceString](#), [createServiceException](#), [getErrorCode](#), [setErrorCode](#)

Methods inherited from class `java.lang.Throwable`

`fillInStackTrace`, `getCause`, `getLocalizedMessage`, `getMessage`, `getStackTrace`, `initCause`, `printStackTrace`, `printStackTrace`, `printStackTrace`, `setStackTrace`, `toString`

Methods inherited from class `java.lang.Object`

`equals`, `getClass`, `hashCode`, `notify`, `notifyAll`, `toString`, `wait`, `wait`, `wait`

---

## Constructors

### ValidationException

```
public ValidationException()
```

Constructs a new exception with `null` as its detail message. The cause is not initialized, and may subsequently be initialized by a call to `Throwable.initCause(java.lang.Throwable)`.

---

### ValidationException

```
public ValidationException(String message)
```

Constructs a new exception with the specified detail message. The cause is not initialized, and may subsequently be initialized by a call to `Throwable.initCause(java.lang.Throwable)`.

**Parameters:**

`message` - the detail message. The detail message is saved for later retrieval by the [getMessage\(\)](#) method.

---

### ValidationException

```
public ValidationException(String message,  
                           Map validationErrors)
```

Constructs a new exception with the specified detail message and a map containing error descriptions. The cause is not initialized, and may subsequently be initialized by a call to `Throwable.initCause(java.lang.Throwable)`.

**Parameters:**

`message` - the detail message. The detail message is saved for later retrieval by the [getMessage\(\)](#) method.  
`validationErrors` - Map containing errors found for different items

---

## Methods

### getValidationErrors

```
public Map getValidationErrors()
```

Returns `validationErrors`, which is a map of errors found for different items.

**Returns:**

the validationErrors errors associated with different properties

---

**setValidationErrors**

```
public void setValidationErrors (Map validationErrors)
```

Sets the validationErrors.

**Parameters:**

validationErrors - the validationErrors to set

---

**getMessage**

```
public String getMessage ()
```

---

**getLocalizedMessage**

```
public String getLocalizedMessage ()
```

---

**toString**

```
public String toString ()
```
