Upgrading an Express License to ESM

This document provides information on how to upgrade an ESM Express license to ESM (appliance). If you are doing a fresh installation of ESM appliance, this information is in the *ESM Installation guide*.

Install New License

If you currently have an ESM Express license, then to deploy the new license file, use the `arcsight managersetup` command. Go through the setup wizard to select the new file and complete the setup process.

Refer to the *ESM Administrator's Guide* for details about the command.

Enable Peering

To enable peering to work after applying the ESM license that includes peering, enable port 9000 using the following commands:

```
[root@rhel7 ~]# firewall-cmd --zone=public --add-port=9000/tcp --permanent
```

```
[root@rhel7 ~]# firewall-cmd --reload
```

Use this command to check that port 9000 is enabled:

```
[root@rhel7 ~]# iptables-save | grep 9000
```

You should get response similar to this:

```
-A IN_public_allow -p tcp -m tcp --dport 9000 -m conntrack --ctstate NEW -j ACCEPT
```

Usage Notes

- ESM in distributed mode is not supported on an appliance, even with an ESM license. Only ESM in compact mode is supported.
- Risk Insight is not supported on an appliance, even with an ESM license.
- The High Availability Module is available as an add-on after you apply the ESM license.
- Pattern Discovery is available as an add-on after you apply the ESM license.

Send Documentation Feedback

If you have comments about this document, you can [contact the documentation team](#) by email. If an email client is configured on this system, click the link above and an email window opens with the following information in the subject line:

Feedback on Upgrading an ESM Express License to ESM: Technical Note (ESM 7.0)

Just add your feedback to the email and click send.

If no email client is available, copy the information above to a new message in a web mail client, and send your feedback to arc-doc@hpe.com.

We appreciate your feedback!
